(a) Calculated after preferred dividend requirements, if any.
 (b) For purposes of the above presentation, the total market basis return has been calculated as the sum of the year-to-year increase or decrease in closing price and of the dividend yield for each year as a percentage of the closing price at the end of the preceding year. The total return shown would be higher if an interest factor also were applied to the reinvestment of cash dividends. The total book value basis return represents the sum of the year-to-year change in book value per share and the cash dividend yield as a percentage of book value at the beginning of each year.
 (c) Cash dividends as a percentage of diluted earnings per share, before investment gains or losses.
 (d) Based on total shares outstanding at end of year.
 (e) "As Reported" has been calculated as net income excluding unrealized investment gains (losses) from changes in fair value of equity securities as a percentage of common shareholders' equity at the beginning of the year. The "Cost Basis" calculation excludes net unrealized appreciation (depreciation) of securities from common shareholders' equity.
 (f) Retroactive adjustments have been made for all stock dividends and splits declared through December 31, 2018.
 (g) Represents the intraday high and low sales price.
 (h) A special cash dividend of \$1.00 per share was declared in December 2017 in addition to the regular quarterly dividend payment of \$.19 per share.
